## Web-Enabled Devices

Newport Electronics, Inc., Santa Ana, CA, introduces the iSeries controllers, panel meters, transmitters, and signal conditioners that connect directly to an Ethernet network with a standard RJ-45 connector. Serving Web pages over an Ethernet LAN or the Internet, the devices allow you to monitor and control a process through a Web browser. The instruments are full stand-alone Internet appliances with embedded Ethernet and Web server capability. Each unit is assigned an IP address on the network and can be assigned an easily remembered name. Devices also work with conventional DA and control programs as well as with Visual BASIC and Excel.
