OM-SP Series
Compact High Precision Data Loggers

$620
Basic Unit

- Models with Temperature, Temperature and Humidity, AC Current and Universal Process Input
- Compact Size, Fits in the Palm of Your Hand
- Bullet Proof Memory Protects your Data
- Outstanding 12-bit Sensitivity
- Easy-to-Use Windows Software

The OM-SP is part of OMEGA’s NOMAD® family of low cost portable data loggers. Models are available for Temperature, Temperature and Humidity, AC current and Universal Process input. All models share a rugged compact form factor small enough to fit in the palm of your hand. Their precision 12 bit analog to digital converter insures accurate readings no matter what input type. All models are compatible with an optional easy-to-use Windows software package that allows the user to configure the data logger, download, display and save the stored data.

OM-SP1700 Series Thermocouple Data Logger

The OM-SP1700 series are designed to accept inputs from commonly available thermocouple temperature sensors. The loggers can be used to record temperatures up to 3200°F (1760°C). Models are available with one, two or four thermocouple inputs. All units also provide ambient temperature readings. The loggers feature automatic cold junction temperature compensation and linearization for accurate and reliable readings. The OM-SP1700 is fully compatible with a broad range of readily-available thermocouple probes in J, K, T, E, R and S types. Each logger is calibrated during manufacture with standards traceable to the National Institute of Standards (N.I.S.T). The software features a simple re-calibration facility. Within minutes, you can calibrate to either 32°C or 212°C or manually to any known temperature within the range of the probe.

OM-SP2000 Temperature and Humidity Data Logger

The OM-SP2000 can measure and store both temperature and humidity with its on-board temperature and humidity sensors. It features an industrial-proven CMOS IC thin-film polymer RH sensor that delivers unsurpassed accuracy. Designed for worry-free recording, it overcomes the drift, temperature error, hysteresis and slow response times characteristic of
E-20

other units, while offering outstanding resistance to airborne contaminates and condensation, so you can count on long-term maintenance free monitoring. The Windows based logger software can display temperature graphs in °F or °C, and humidity graphs in %RH or dewpoint units.

OM-SP4000 Universal Process Data Logger

The OM-SP4000 series loggers are ideal for measuring process signals such as dc voltages and currents. Models are available with one to four voltage or current inputs. The models with current inputs include an excitation switch that allows the logger to control an external current loop power supply (the four channel model provides the excitation switch on channels 1 & 3). With this software-configurable switch the logger can automatically shut off power to loop-powered transducers between readings and conserve external battery power for extended worry-free monitoring.

Logger Software

The accessory Windows software package makes it easy to download, analyze and display information from any OM-SP series. The software is a full-featured program that includes data logger setup functions such as delayed start, adjustable sample rates, sensor calibration and real-time displays. The program also includes essential graphing and analysis functions such as zooming, automatic and manual scaling, tabular views, and exporting. The software is compatible with Windows 95, 98 or NT version 4.0.

Specifications

GENERAL (COMMON TO ALL)

A/D Conversion: 12 bit
Log Rate: Selectable from 10 s to 1/day (in multiples of 10 seconds)
Memory: Non-volatile, 21,500 samples
Memory Retention: >20 years without power

Power Source: 3.6 V internal lithium battery
Battery Life: 10-year life at 1 min. sampling (factory replaceable)
Clock Accuracy: ±1 min./mo. over full operating range
PC Interface: Serial port, half-duplex, 19,200 baud
Enclosure: Injection-molded ABS plastic
Size: 2.8 x 2.1 x 0.7" (71 x 53 x 18 mm)
Weight: 62g (2.2 oz)
Mounting: Magnetic strip on back
Environmental: -40 to 70°C (-40 to 158°F) operating temp range and 0 to 95% relative humidity

OM-SP1700 SERIES THERMOCOUPLE LOGGER

Input Type: Thermocouple, type J, K, T, E, R and S
Number of Inputs: 1, 2 or 4 depending on model

Accuracy: See thermocouple accuracy chart below

Resolution: See thermocouple resolution chart below
Input Impedance: >500 K Ohms
Cold Junction Compensation: Automatic using internal thermistor
Input Connector: Screw-type plug-in terminal block accepts bare leads
OM-SP2000 TEMPERATURE AND RELATIVE HUMIDITY LOGGER
TEMPERATURE SENSOR (Integral)
Sensor: Precision calibrated NTC thermistor; 100 K Ohms @25°C
Accuracy: ±0.25°C @25°C, better than 0.5°C over -30 to 50°C (-22 to 122°F)
Resolution: 0.05°C @25°C, better than 0.2°C over -30 to 50°C (-22 to 122°F)
Humidity Sensor (Integral)
Sensor: Capacitive thermoset polymer-base monolithic integrated circuit. Temp compensated over range
Range: 0 to 100%RH
Accuracy: ±2% over 10 to 90% RH @25°C
Resolution: 0.05% RH

Response time: <1 min. in slow moving air
Repeatable: 0.5% over 0 to 75% RH
Stability/Drift: ±1% RH typical at 50% in five years
Hysteresis: ±0.8% of span (maximum)
OM-SP4000 PROCESS INPUT LOGGER
Accuracy: 0.15% FS
Resolution: 0.025% F.S.
Input Connector: Screw-type plug-in terminal block accepts bare leads
VOLTAGE INPUTS
Ranges: 0 to 1 and 0 to 10 Vdc software switchable
Input Impedance: >1 M
Overload Protection: 30 V (reverse polarity protected)
