### Operational Precautions

- When the cover becomes dirty, wipe it with a clean, soft, damp cloth. If dirt cannot be wiped off, use a soft damp cloth with a weak solution of neutral detergent and completely wipe off any remaining dampness with a soft dry cloth.
- Never use a chemical liquid such as alcohol, benzene, or a thinner and never spray an insecticide or organic solvent. This may cause a deformation or discoloration.
- Ensure that the battery included in the packing with the recorder may not last a full year after delivery.
- Never insert the battery incorrectly. Be sure that the positive and negative poles are not reversed from the markings on the recorder. Otherwise, the chart will not turn.
- Kokusai Chart Corporation is not responsible for any damage to users caused by the use of this recorder.

### Limited Warranty

OMEGA ENGINEERING INC. warrants this instrument to be free from defects in materials and workmanship and to give satisfactory service for a period of twelve months after delivery. If the instrument should malfunction, it must be returned to the seller for evaluation. Upon examination by OMEGA ENGINEERING INC, if the instrument is found to be defective, it will be repaired or replaced at no charge at OMEGA ENGINEERING INC’s option. This warranty is void if the instrument shows evidence of tampering or shows evidence of being damaged as a result of accident, abuse, improper installation and application as determined by OMEGA ENGINEERING INC. OMEGA ENGINEERING INC makes no further warranty of any kind with regard to this manual, including, but not limited to, implied warranty of merchantability and fitness for a particular purpose.

</table>

### Prohibited Actions

- Never loosen the white screw. Otherwise, the temperature and humidity readings cannot be guaranteed.
- This recorder cannot be used for any accounting or certification transactions.

### Notes

- The pen cartridges are designed to last for six months without replacement, but this period may vary depending on the installation environment.

---

**Instruction Manual**

CTH100 TEMPRH RECORDER
1. First-time Use

(1) Opening and Closing the Cover and Removing Pen Arm Positioning Material
- Place the recorder on a flat surface. Press the latch (g192) located on one side of the recorder and lift both sides of the cover (g193).
- When closing the cover, be sure to do it gently, pressing down on both sides (g193) in a reverse manner from opening until the latch (g192) clicks shut.
- Remove from between the necks of the pen arms the foam rubber piece use in transport.

(2) Installing the Battery
- Install the included battery (IEC R6P, ANSI AA) in the holder with its + pole facing left. Installing the battery starts running the chart.
- See Figure 2. Attach the battery holder cover at the rear of the recorder.

(3) Attaching the Pens
- Slightly lift the tip of the pen rest to release it from its latch pin and turn it clockwise until the recording pentips are supported on the rest, as shown in Figure 3. (The pen rest keeps the pens from making marks on the chart.)
- Take the pen cartridges out of the package and remove the caps. Place the caps on the holders (projections) as seen in the upper right corner in the figure.
- Attach the pen cartridges, referring Figure 4, with the red pen attached to the pen arm marked “°C” or “°F” for temperature recording and the blue pen to the arm marked “%” for humidity recording.
- Press the two ends indicated by the arrows to release the sides of the spring clip A-B.
- Attach the pen cartridge so that the guide pins fits into the guide holes on the pen arm.
- Press the sides of the clip indicated by the arrows to engage the clip and secure the pen. Be sure that the cartridge fits snugly on the arm, as observed from the side.
- To attach or replace the blue pen cartridge (the bottom cartridge) when the red pen arm is directly above, move the arm for the blue pen to the 0% side. Never move it to the 100% side.

(4) Starting Measurement (Recording) and Setting the Time
- To start recording, simply move the pen rest to its original position.
- The tips of the chart guide on the left-hand side (from among two guides) projects to a point. Place the recording chart so that the tip points to the current time on the time scale on the chart.
- The chart’s drive mechanism has a play in rotation of approximately one hour. (for an 8-day recording model).
- To adjust the recording time precisely, turn the chart clock-wise to align the time scale to the current line. When adjusted, the tip of the red (temperature) pen nearly points to the current time.
- Replace the chart wit a new one every eight days from an 8-day recording model (flexible, every day and every 32 days for the 1-day and 32-day recording models).
- The chart can be replaced with the recorder installed.
- To install the recorder, refer to INSTALLATION.

(5) Stopping Measurement (Recording)
- When stopping measurement or when measurement for a prescribed period is completed, place the caps back on the recording pens to prevent the ink from volatilizing.
- Remove the battery.

2. Replacing the Recording Chart
- Slightly lift the tips of the pen rest to release it from its latch pin and turn it clock-wise until the recording pen tips are supported on the rest.
- Lift the chart’s magnetized hub cover off and replace the chart with a new one.
- Verify that the new chart is correctly positioned under the three chart guides.
- When not in use, the hub cover can be set on the recorder panel in the magnetized bottom right corner, as shown in Figure 5, to avoid losing it.

INSTALLATION

1. Mounting Position
- Basically, this recorder should be mounted on the wall.
- To view the recorder from the front, be sure that it is mounted vertically as show in Figure 6. Tilted mounting will cause a reading error.
- A forward or backward inclination within ±10° is allowed, as shown in Figure 7.

2. Installation Procedure
- Hang the recorder on a wall or column. Use the attached wood screw is necessary.
- Avoid using the type of self-adhesive hooks available to many hardware stores. The hook may come off if it is must constantly support the weight of the recorder.

3. Precautions on Installation Location
- Do not seal the ventilation openings on the sides and at the bottom of the case since there are temperature and humidity sensors in it. Be sure there is nothing within 20 cm around the recorder.
- Do not install the recorder where it will be exposed to direct sunlight, on a stove, or near the duct of an air-conditioner.
- Do not installed the recorder in an environment where dust or poisonous gases are present, where vibration or mechanical shock may occur, or where it will be exposed to elements of nature.
